

THE POST SPEED LEAD

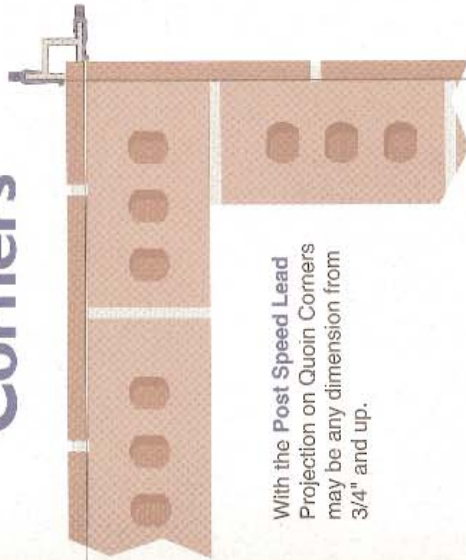

The Post Speed Lead is the fastest, easiest to use speed lead you can buy. The Post Speed Lead was invented, perfected and patented by a bricklayer. It works on all applications of brick veneering, outside or inside corners and quoin corners. Corners laid with the Post Speed Lead are straight and clean.

THE POST SPEED LEAD
FEWEST PARTS,
FASTEST SET UP...
THE BEST SPEED LEAD
YOU CAN BUY.

Quoin Corners

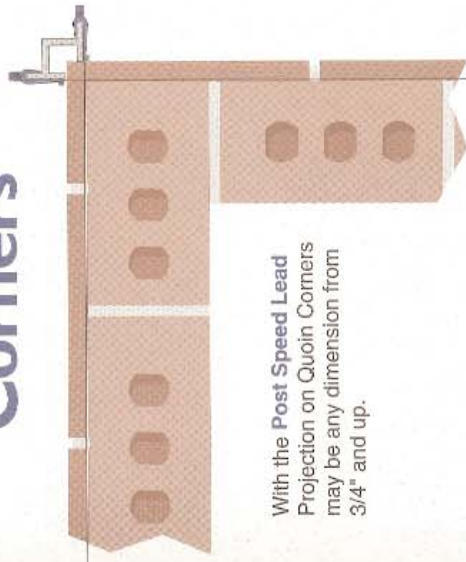

With the Post Speed Lead Projection on Quoin Corners may be any dimension from 3/4" and up.

With the Post Speed Lead no bottom bracket is required after the first corner unit is laid.

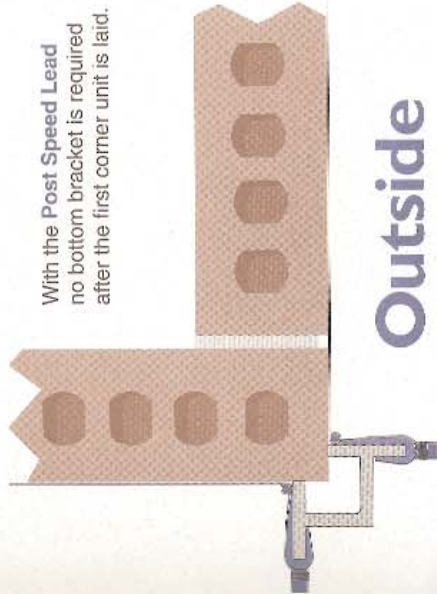

Outside Corners

Quoin Corners

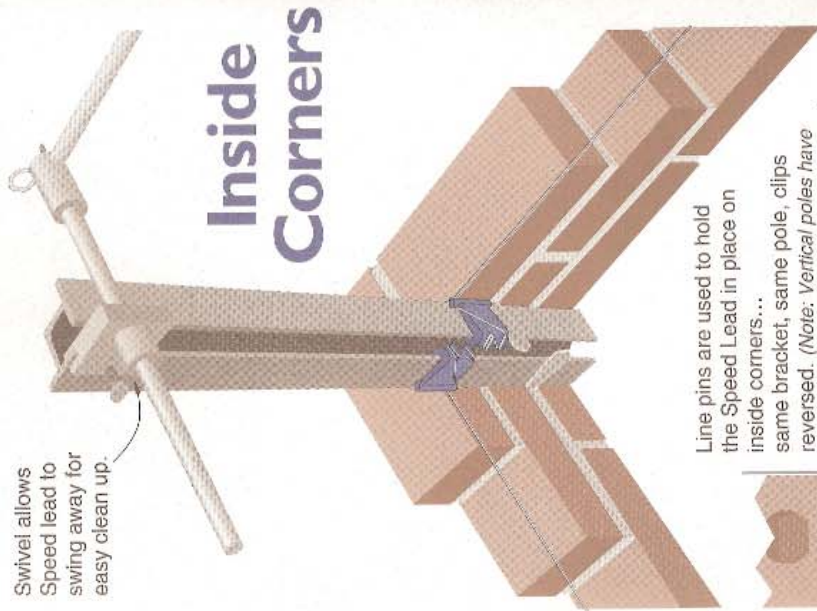

With the Post Speed Lead Projection on Quoin Corners may be any dimension from 3/4" and up.

With the Post Speed Lead no bottom bracket is required after the first corner unit is laid.

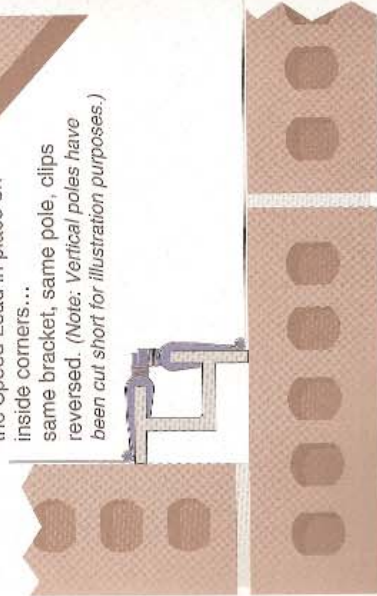

Outside Corners

Swivel allows Speed lead to swing away for easy clean up.

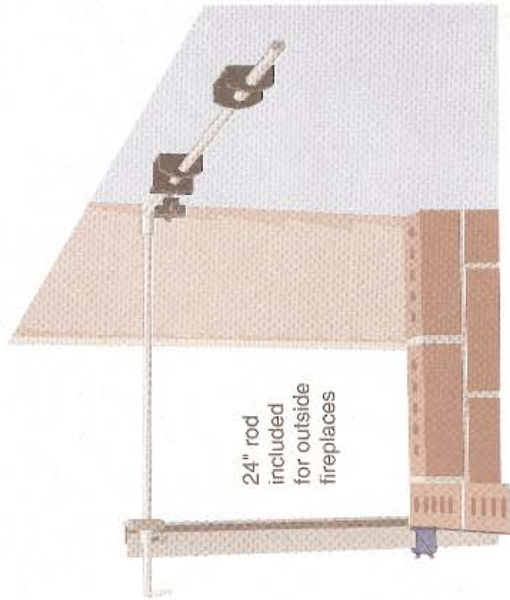

Inside Corners

Line pins are used to hold the Speed Lead in place on inside corners... same bracket, same pole, clips reversed. (Note: Vertical poles have been cut short for illustration purposes.)

Fireplaces

24" rod included for outside fireplaces

The Post Speed Lead needs only one bracket after the first brick is laid. The bottom of the vertical pole is held against the brick by the tension of the line.

Quoin corners may be laid without adding to the pole or relocating the pole. The line is placed on the back side of the pole as in illustration.

The vertical poles are 8' aluminum extrusions.

The Post Speed Lead brackets are easily installed and removed and include a swivel allowing Speed Lead to swing away from brick work for easy striking and clean up. No adjustments or reattachments are necessary. Bricklaying can resume in seconds by reconnecting the line clips.
